

User Story: Select inputs

As a User,
I want to select inputs
So that I can use them to generate input files;

Acceptance Criterion 1:

When User open the Inputs Selection screen,
Then User can see Channels, Geographies, Products available in database
Then User can chose among them ;

Acceptance Criterion 2:

Given User does not choose at least one Channels, Geographies, Products
When User try to proceed,
Then Show validation error(s);

Acceptance Criterion 3:

Given User made valid selection,
When User proceed to next step,
Then User's choice should be preserved;

User Story: Configure Settings

As a User,
I want to configure settings: select goal with target value, target data range;

Acceptance Criterion 1:

When User open configuration settings screen
User Can set goal with target value, target data range;

Acceptance Criterion 2:

When the user try to proceed to next step,
Then check all configuration settings has been set;
When there is any field is not set,
Then show the validation error to the user.

Acceptance Criterion 3:

Given the Settings are valid,
When the user proceed to next step,
Then configuration settings should be preserved;

User Story: Generate Input file

As a User,
I should be able to generate input files
based on selected inputs and configuration.

Acceptance Criterion 1:

Given inputs are selected and settings are configured
When User Click a button,

Then input files content should be generated;

Acceptance Criterion 2:

When input files content are generated,

Then input files should be saved to (user specified) location;

User Story: Run the script

Given inputs files are generated

Then Run the script against input files

User Story: Save output files

When the scripts run successfully
